

FOR IMMEDIATE RELEASE

RENOWNED ARCHAEOLOGIST DR. SCI. SEMIR SAM OSMANAGICH LOCAL LECTURE SERIES
Discovered Bosnian Valley of the Pyramids and Foreign Member of the
Russian Academy of Natural Sciences
“Are the Bosnian Pyramids the Discovery of Our Generation?”

**Tuesday, March 29 7:00 PM – Public Invited - Maggie L. Walker Governor’s School
for Government and International Studies, Richmond, VA
1000 N. Lombardy St.**

Pyramid of the Sun

Osmanagich

Bridging Boundaries International welcomes world-recognized archaeologist, Dr. Semir Sam Osmanagich to Virginia. He will lecture on his discoveries of the first pyramids in Europe. Although challenged by some of his fellow archaeologists/scientists, Osmanagich continues to move forward with his controversial research. Osmanagich claims, as the oldest manmade structures, the Bosnian Valley of the Pyramids along with its concrete, stone blocks and primitive inscriptions, have proven to be over twelve thousand years old.

Osmanagich and his team are currently working to unearth passageways throughout the Bosnian “Pyramid of the Sun” and labyrinths within the “Pyramid of the Moon” based on his initial findings in 2005. The Bosnian Valley of the Pyramids in Visoko, Bosnia-Herzegovina (near Sarajevo) is a grouping of five of the largest stone structures crafted by man. Connected by an ancient underground network and deliberately oriented to the cardinal points, these historic monuments have been drawing scientists, anthropologists and tourists alike. Arguably the most influential aspect of this new discovery is its positive effect on the local Bosnian community. Volunteers from all cultural backgrounds are working together to unearth the secrets of their common history. Many of Osmanagich’s critics, however, believe these structures were actually created by shifting tectonic plates and the earth’s natural movement over centuries.

However, an overwhelming degree of support has materialized as tourists and volunteers swarm the area. Journalists spanning the globe have reported on the affect that Osmanagich’s research continues to have on local history as well as deeper understanding of our world. Osmanagich’s discoveries may be changing world history as we know it. As part of his worldwide tour of twelve countries, Osmanagich is visiting Virginia to conduct a series of lectures emphasizing his latest research, the most recent findings of his non-profit foundation “Archaeological Park: Bosnian Pyramid of the Sun”, and his new book, “Pyramids around the World.”

Note to media: Other lectures
Wednesday, March 30—Williamsburg, VA
Thursday, March 31— 10am, Atlee High School, Richmond, VA.
Thursday, March 31— 2pm , Lee Davis High School, Richmond, VA
